I am a Game Developer / Engineer. My Work involves Planning, designing, and implementing High-Quality game features while working independently Or alongside a team, Transforming design specifications into functional Game assets, Identifying and correcting issues and bottlenecks in order to optimize the game and its performance, and Enhancing the user experience by creating seamless navigations and reliable code. I worked on both mobile and web games and my major interest areas are casual and hyper casual games with focused user experience.

PROFESSIONAL EXPERIENCE

Skill Knight Studios

Lahore, Pakistan

January

2022–Present

Games Development Engineer - Unity
Projects:

Wild and Friends

- A web3 (WEBGL) game based on Dungeons and Dragons concept to engage users in text intensive adventure based quests to explore exciting and face encounters, paths and creatures.
- Developed the whole game from scratch as a solo developer and worked with remote teams of web and blockchain developers
