- **Tools:** Unity, BitBucket, Github, Sourcetree, Jira, HacknPlan, Linear

LANGUAGES

English, Urdu, Punjabi

PROJECTS

Z Defence — *HyperCasual Game.*

A hyper casual mobile game on which my team worked on LiveOps with the team from publisher “Homa Games” to increase the game’s KPIs and ad revenue, My key responsibilities at this project were:

- Working as the lead developer, making sure that the project delivery is on time and working with QA to ensure the features are bug-free.
- Providing dev estimates for each feature.
- Understanding the existing code architecture and build new features consistent with the current architecture.
- Working with the artists and game designer in designing new features which can help improve player retention and LTVs.
- Designing new features and improving existing feature designs with real-time user feedback from analytics.
- Optimizing the game.

PolkaCity — *Multiplayer NFT based PC Game.*

NFT Multi Chain Social Platform and Video Game where users can purchase NFT’s and use them in game. My key responsibilities at this project are:

- Implementing a drone within the game that users can fly across the city. Syncing the drones over the network for a smooth multiplayer experience using Photon PUN.
- Improving an existing car controller with a more realistic feel and better handling.
- Finding and modifying plugins suitable according to the game requirement.
- Identifying the issue in the player animations and improving the animations with collaboration of an artist.
- Creating separate scenes for different buildings in the city and improving the lighting in the scenes.
- Fetch real time data from API and create separate room types based on the data. Also updating the city according to the events.

Harvester Rush — HyperCasual Game.

A hyper casual mobile game which later was transitioned into an arcade ideal game, My key responsibilities at this project were:

- Taking over the game from the prototype phase and building its architecture into a proper game.
- Working on the main game mechanics and game progressions.
- Building UI from ground up and linking it to the progression and monetization.
- Designing new features and improving existing features designs with realtime user feedback from analytics.
- Improving the overall feel of the game with particle effects and animations.
- Creating the game economy and a complete dynamic tier system with increasing difficulty and rewards.
- Optimizing the game.

Food Cutting — HyperCasual Game.

Ranked **#3 in USA Appstore** and **#1 in 38 countries** with several Tier1 countries in September 2021. My key responsibilities at this project were:

- Building multiple levels of the game from ground up.
- Working on the main game mechanics and game progressions.
- UI improvements and implementation of various UI intensive features such as the Gift Box.
- Designing new features and improving existing features designs with realtime user feedback from analytics.
- Improving the overall feel of the game with particle effects and animations.

Hyper Casual Prototyping

My key responsibilities here were:

- Developing fast paced prototypes of hyper casual game ideas to observe cost per install and User retention. These games then would be used for further development if passed the metrics.
- Keeping myself aware of top trends in the hyper casual space.
- Working on a game design document to identify the main mechanic and progression of the game.
